

My name is Craig Lynch G.G. and I am the owner of Ouellet & Lynch, a professional, independent gem and jewelry appraisal firm in Phoenix Arizona. I recently started using the DiaScope for quick close-up documentation in my professional appraisal practice. I must say I am very pleased with the results! The DiaScope gives the best close-up images that I have found for a phone camera. The DiaScope with its glass lenses and ring lighting gives quick, detailed, images in the office or out in the field. I love it!

Here are some examples:

A. The damage to jewelry.. like a missing prong or a crack in a shank!

B. Diamond treatments like laser drilling

C. DiaScope is great for many gemstone inclusions such as the natural structure in this 34 carat Sri Lanka sapphire

Or

The “horsetail” inclusion in this Russian Demantoid Garnet

The DiaScope is easily charged with its USB attachment and is small and you can carry it anywhere

I can honestly recommend the DiaScope to any gemologist, jeweler and dealers in the gem and jewelry industry!
